DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 37-52, drawn to a semiconductor circuit module, classified in class 257, subclass 414.
- II. Claims 25-36, drawn to a method of making a redundancy structure, classified in class 438, subclass +1.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatenability of Group II invention would not necessarily imply unpatenability of Group I invention, since the process of Group II invention could be used to make a product materially different from that of Group I Invention. For example, the method of claim 25 can be used to form a semiconductor circuit module having no contact area on a front side, which is structurally different from the device of claim 37 where it has contact area on a front side.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the

Art Unit: 2815

search required for Group II is not required for Group I and separate examination would be required, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
